MEDICINE IN OUR LIVES

PAST
- Help individuals
- Protect others
- Family doctor
- Microenvironmental surveillance

PRESENT
- Points-of-care
- Recruitment/registration
- Informed consent
- Exam
- Specimen collection
- Digital imaging

FUTURE
- Networking
- Telemedicine: bridge to equality
- Standards: health needs, not only healthcare demands
- Measured: robust clinical parameters: incidence, prevalence, and mortality

REVERSE DISEASE TRENDS
- MODEL: CERVICAL CANCER
  - Pop tests have made impact in the US only after the outreach of women at risk went beyond 50%
  - More than 90% were Pap test negative, but 7% Pap positive helped doctors to reduce the cervical cancer mortality for 80% - the best anticancer prevention

WOMEN OF ALL COLORS UNITE

NEW TOOLS: TELEMEDICINE PROTOCOL FOR SERVICE DELIVERY
- Markups: digital telescopendoscopy system
